PROFILE

Data and AI professional with experience building applied machine learning systems and turning complex technical work into clear, usable products. Strengths in data pipelines, model evaluation, and communicating results to non-technical stakeholders.

PROFESSIONAL EXPERIENCE

Data Scientist

Feb 2023 - Present

Example Analytics, Melbourne, Victoria

- Built an anomaly-detection pipeline combining statistical and ML methods, reducing fault-detection time by over 80%
- Deployed and monitored classification and time-series models on live operational data
- Automated data validation and feature extraction from streaming sensor sources

Machine Learning Intern

Nov 2021 - Feb 2023

Sample Tech, Remote

- Prototyped a retrieval system over technical documents, improving answer accuracy in internal tests
- Wrote evaluation tooling to track model performance across releases

EDUCATION

Master of Data Science

2021 - 2022

Example University

- Capstone on anomaly detection for energy systems (statistical modelling + ML)
- Relevant coursework: Statistical Machine Learning, Advanced Databases, Cloud Computing

TECHNICAL SKILLS

- Programming & Data: Python, SQL, R; Pandas, NumPy
- ML & AI: Scikit-learn, PyTorch; Transformers, LangChain, OpenAI API
- Cloud & Deployment: Azure, GCP, Docker, Git, GitHub Actions

AWARDS & RECOGNITION

- First Prize, Example AI Hackathon 2025
- Dean's List, Example University
